PROFESSIONAL PROFILE

Test Automation Manager with 14+ years of hands-on experience building reliable, scalable automation and AI-driven testing frameworks across commercial insurance (CL & P&C), healthcare, and media domains. Skilled in modern automation tools, programming languages, and cloud-integrated QA practices. Known for leading high-performing teams, simplifying complex testing ecosystems, and driving CI/CD-aligned quality engineering. Strong believer in quality-first delivery, practical innovation, and continuous improvement in both technology and process.

CORE COMPETENCIES

- **Test Automation & Frameworks:** Playwright, Selenium, Cypress, Gauge, WebDriver IO
- **AI Tools:** Copilot, Opus, Sonnet, OpenAI, Semantic Kernel, Microsoft AI Quality, Playwright MCP
- **CI/CD Integration:** Azure DevOps, GitHub Actions, Jenkins, GitLab Pipelines
- **Testing Methodologies:** Functional, Regression, Performance (JMeter), API (Postman, Rest Assured)
- **Programming & Scripting:** Java, JavaScript, VB, Node.js
- **Agile & DevOps:** Scrum Mastery, BDD, Shift-Left Testing, SAFe Methodology
- **Monitoring & Analytics:** Grafana, Kibana, PagerDuty, SumoLogic, Dynatrace
- **Test Management**: JIRA, ADO, Rally, HP-ALM
- **Frameworks**: Page Object Model (POM), BDD, Keyword-Driven, Hybrid
- **Data Base**: SQL, MongoDB, Cosmos DB, MySQL

WORK EXPERIENCE

LTIM - Hartford, CT, USA | Client: **Selective Insurance**

Role: Senior Specialist - Quality Engineering

May 2022 – Present

Lead quality engineering initiatives across GenAI, automation, and modernization programs, driving enterprise-level transformation in underwriting and automation workflows. Manage a team of automation engineers while architecting next-generation frameworks, AI-driven testing solutions, and CI/CD-integrated quality pipelines.

GenAI Model Testing & Skill Engineering

- Designed and executed test strategies for Retrieval-Augmented Generation (RAG) models, ensuring accuracy, reliability, and domain alignment for underwriting document search.

- Designed OpenAI-powered validation workflows using engineered prompts to assess response quality across dimensions such as factual accuracy, contextual alignment, hallucination detection, and linguistic clarity.
- Created synthetic datasets and prompt variations to evaluate model robustness across diverse underwriting scenarios.
- Collaborated with underwriting SMEs to define acceptance criteria and quality benchmarks for GenAI outputs, establishing enterprise-grade golden datasets.
- Built reusable AI skills using the Opus model and integrated them with Sonnet, enabling standardized skill modules that can be shared across teams and consumed directly within VS Code.

AI-Driven Automation Frameworks & Intelligent Analysis

- Developed an AI-powered automation framework capable of intelligent PDF comparison and automated failure analysis using Azure DevOps data.
- Integrated AI-driven test case generation to expand coverage for complex user interactions (PoC).

Application Modernization (Java → .NET)

- Led modernization efforts to convert legacy Java automation and components into .NET, leveraging Sonnet-based code transformation workflows.
- Built automated validation steps to ensure functional parity between Java and .NET implementations, reducing migration effort by 40%.
- Designed reusable enterprise libraries to standardize future modernization initiatives.
- Managing a team of 5 automation engineers to build a hybrid Playwright + Gauge (BDD) framework in C#, including enterprise libraries and YAML templates for unattended execution across pipelines.
- Spearheaded GAUGE-based automation adoption across multiple projects, reducing script maintenance and improving consistency.
- Converted E2E UI tests to API-level tests using Rest Assured, reducing regression cycle time by 75%.

Azure DevOps Pipeline Engineering & Test Orchestration

- Maintain and enhance **Azure DevOps test-run templates** for both Java and .NET automation projects, ensuring consistent, scalable, and reusable pipeline configurations across teams
- Designed and implemented **new pipeline templates** to support full end-to-end test execution immediately after code deployment, enabling automated quality gates without manual intervention.
- Engineered an **orchestration pipeline** that automatically triggers smoke and regression pipelines in sequence, monitors execution status, and enforces quality thresholds before promoting to the next stage.
- Enabled fully autonomous CI/CD test execution by integrating pipeline triggers, environment-based routing, and automated reporting, significantly reducing manual oversight.
- Standardized YAML templates across teams, improving maintainability, reducing configuration drift, and accelerating onboarding for new automation projects.
- Developed YAML templates for standardized CI/CD testing stages, improving pipeline flexibility and execution reliability.
- Created feedback loops and dashboards to communicate application health after every CI/CD release.

Quality Governance, Collaboration & Mentorship

- Established QA best practices, quality metrics, and standardized processes, reducing release delays by 30%.
- Conducted quality audits, code reviews, and defect triage sessions to ensure adherence to testing standards.
- Mentored junior engineers, improving team productivity by 20% through coaching, code reviews, and skill development.
- Coordinated with developers, product owners, and business analysts to align on quality goals and ensure critical defects were resolved before production releases.

Willis Tower Watson - Buffalo, NY, USA

Role: Lead Associate

April 2020 – April 2022

- Coordinated closely with product owners to groom user stories and ensure seamless integration of testing requirements.
- Actively managed the end-to-end **quality assurance processes** for multiple agile projects, coordinating test planning, execution, and defect management to meet high-quality standards.
- Conducted technology needs assessment and solution implementation, resulting in adoption of Cypress.
- Drove feature-based automation using **Cypress**, enhancing early defect detection and reducing manual testing by 60%.
- Performing manual testing of the application and then creating/enhancing automation test scripts for regression testing using selenium integrated with Browser Stack (only E2E tests).
- Released updates to production while delivering release notes and demoing new functionalities to stakeholders.
- Functional testing of APIs under test using **Postman** and Cypress.
- Fixing low priority defects related to API and UI components.
- Monitoring the live incidents, fixing the data if required and identifying the RCA.
- Mentored junior team members on automation best practices and led initiatives to streamline test execution.

LTI - Chennai, India & Hartford, CT, USA | Client: **Travelers Insurance**

Quality Engineer – Test Lead

February 2015 – April 2020

- Actively participate in Agile Scrum by attending Daily Scrum, User Story Grooming, Iteration Planning, Iteration Demo and Iteration Retro meetings.
- Review and analyze User Stories and provided feedback for Definition of Done and Acceptance Criteria in an Agile Scrum environment.
- Involved in Test Planning, Test Execution and Defect management. Well-experienced in writing and reviewing Test Plans, Test Reports, Test Scenarios, and Test Cases based on documented User Stories.
- Used IntelliJ IDE for creating and modifying existing APIs to provide data for the dependent teams.
- Creating YML file for building, testing and deploying code using pipeline in GIT (Using existing templates)
- Automate Regression/Functional testing of all the APIs under test using **JMeter** and integrate the tests in pipeline.
- As part of **Performance** test, Analyzing the Load on all the services under test using **JMeter**.
- Maintaining and enhancing automation scripts for my bounded context / capability using **Selenium** POM Framework.
- Executed automated Test Cases for Regression and analyzed test failure for defects.
- Lead a crucial role in converting existing selenium framework to **WebDriver IO** based framework.
- Identify root causes for the issue reported by dependent teams and bring them to closure during onshore hours.
- Performed Back-end Testing by writing Mongo/SQL DB queries to fetch data and validate that data with front-end.
- Well versed in using Version Control System – GIT on Web-Based hosting service – GitLab.
- Assigning work and supporting the onshore/offshore team for quality related activities. Conducting internal audits on testing processes on all teams to ensure compliance. Creating metrics for various presentations and supporting leadership meetings.
- Creating innovative tools and utilities to enhance testing experience and moving more towards automation.
- Delivering the test summary report and sign off documents after completion of each iteration. Involved in creating Project Deliverables like Test Summary Report, Release Metrics and Proposals.

Cognizant Technology Solutions - Chennai, India | Client: **Travelers Insurance**

Associate – Quality Engineering

May 2011 – January 2015

- Testing Native, web and Hybrid applications on different devices.
- Preparing and updating Test scenarios, Test cases, Defect report and Test data documents for the testing activity to be carried out and Execution of the test cases for each build for the above applications.
- Sending status report in detail to Stakeholders after each successful test execution.
- Updating the status of test execution in client calls on daily basis.
- Preparing smoke test scripts for the applications under test to check the functionalities.
- Testing the applications compatibility on the latest iOS and android versions.
- Perform Energy diagnostics to see how much of the device's battery life each function in the application consumes.
- Performing App Store guidelines testing on the application for IOS and ANDROID.
- Automating the mobile application, finding out memory leaks and summarizing the memory allocation in the application under test using **Apple Instruments**.
- Future Sprint planning for automation and manual testing after each sprint is successfully completed.

EDUCATION

Bachelor of Engineering in Electronics and Communication
Kings College of Engineering, Affiliated to Anna University, Chennai, India

ONGOING LEARNING

- **Advanced Test Automation Techniques:** Currently exploring advanced frameworks and tools such as Playwright MCP server and Robot Framework for UI and API automation.
- **Cloud Integration & DevOps:** Gaining expertise in cloud-based testing environments and infrastructure automation using AWS and Azure DevOps.
- **Data Analytics for QA:** Enrolled in courses on data visualization and analytics tools (e.g., Kibana, Grafana) to enhance data-driven insights for testing metrics.
- **Agile & Leadership Development:** Engaging in workshops on agile coaching and leadership to strengthen team management skills and agile process optimization.
- **Programming Skills:** Continuously advancing in Java and JavaScript and expanding into Python for test automation and scripting flexibility.
- **Certifications:** AZ-900 in progress.
- **AI Tools:** Exploring python-based libraries like Lang Chan for Gen AI testing.
- **Playwright Agents:** Continuously exploring modern testing approaches, including hands-on work with Playwright agents to evaluate how autonomous test generation and self-healing execution can strengthen future automation strategies.

DECLARATION

I hereby declare that the information presented in this resume, including my experience in GenAI model testing, automation frameworks, and related technical skills, is accurate and true to the best of my knowledge. I affirm my commitment to uphold the integrity and professionalism reflected in this resume.
